CLOUDSPACE

VIDEO MEETINGS · ON A DEDICATED INSTALLATION

Your meetings, in your own cloud.

✓ Nothing to install
✓ Guests without an account
✓ Waiting room
✓ Recording to Drive
✓ Spanish and English

0 installs
video, audio, chat and screen sharing in the browser

Port 443
media gets through the company network even when it blocks calls

1 installation
per customer: its own media server, data and recordings

THE CHALLENGE

Meetings happen every day.
Where does what is said end up?

Sales, support, interviews, board meetings: much of the work happens on a video call. Almost always on someone else's platform, with their rules, their servers and their terms.

Your conversations, in someone else's cloud

Video, chat and recordings travel through and are stored on the provider's infrastructure, out of your control.

Guests who can't get in

They are asked to install an app or create an account, or their company network blocks the call.

Tools that don't talk to each other

Email, calendar, files and meetings apart: every invitation and every recording is moved by hand.

THE REAL QUESTION

It is not “which app do we meet on”, but “who controls what is said, recorded and shared in them”.

THE PLATFORM

Cloud Meet is your organization's meeting room, run by Nube4

An installation that is yours alone, on your domain and in Spanish and English. Your team meets, schedules, moderates and records; Nube4 installs it and keeps it up to date.

01 Join

Video, audio, chat and screen in the browser, even from locked-down networks.

02 Organize

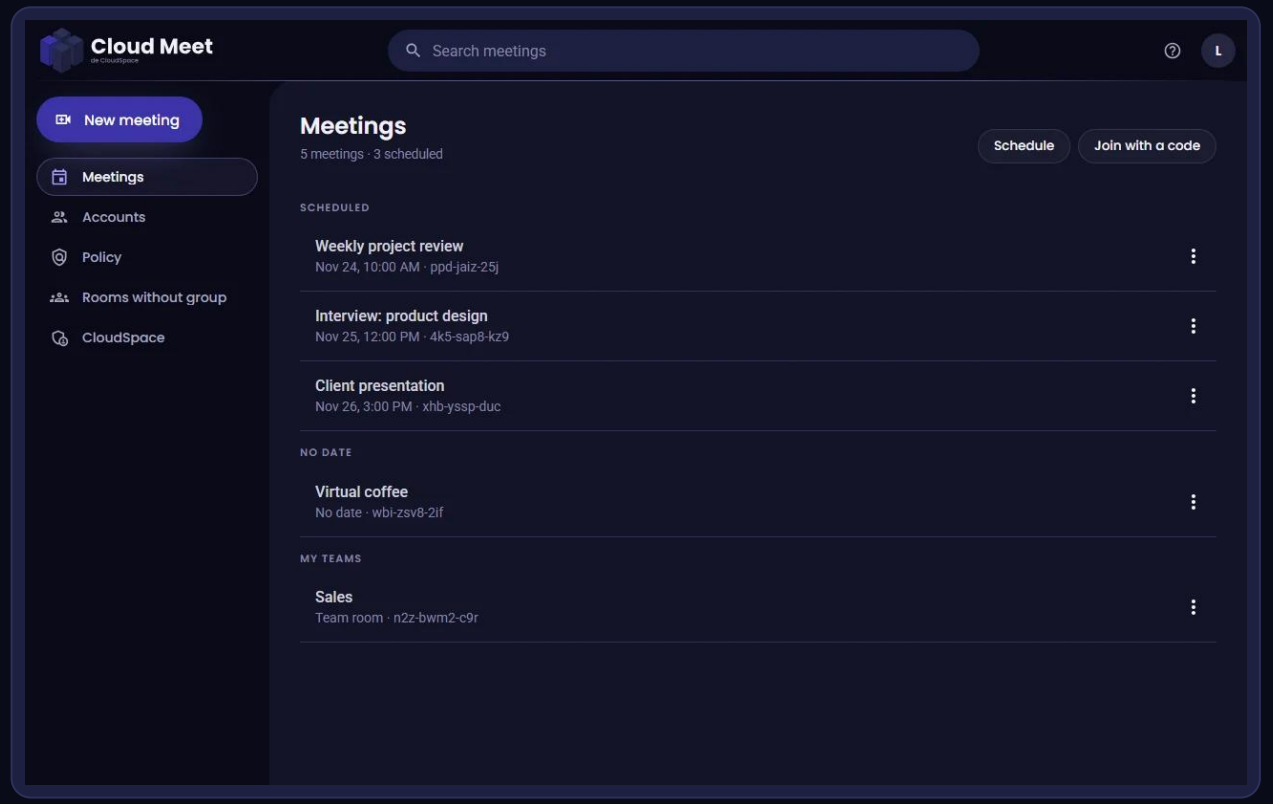

Scheduled meetings, calendar invitations and recordings to Drive.

03 Control

Waiting room, moderation, passcodes, personal links and policy.

04 Integrate

One CloudSpace account, team rooms, Cloud Mail and Cloud Drive.

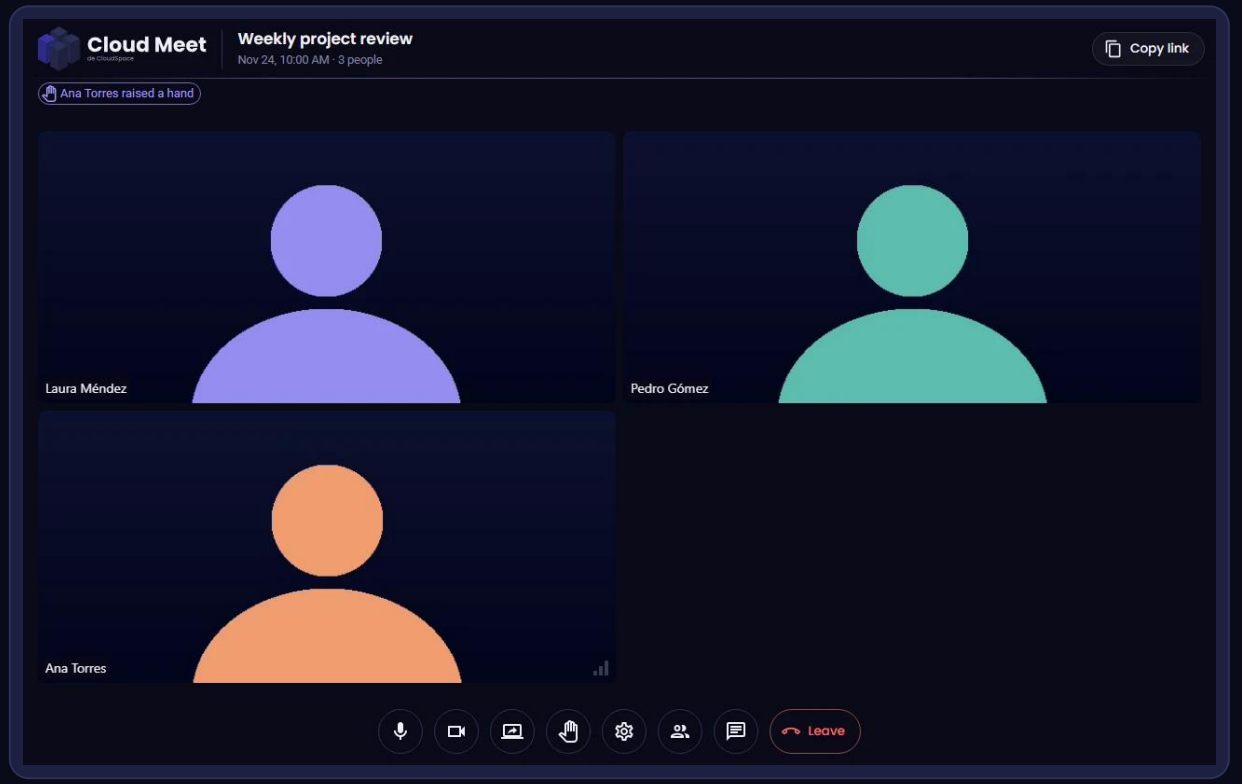

01 · JOIN

You open the link
and you are in the meeting

Video, audio, chat and screen sharing in the browser. The people you invite install nothing and need no account: they type their name and join.

- ✓ **Lobby with a preview.** You see your camera, pick a microphone and camera and join with them on or off.
- ✓ **What you expect from a meeting.** Screen sharing, raising your hand, chat with links and switching devices without leaving.
- ✓ **Clear without color.** Microphone or camera off, raised hand and who is speaking each have an icon; the host has a word.
- ✓ **Drive files in the chat.** A read-only link for 7 days that guests can open too.

01 · JOIN · DIFFICULT NETWORKS

It works on the company network, even when it blocks calls

If a firewall closes the video call ports, Cloud Meet sends the encrypted media through 443, the same port as the web. If the network drops for a moment, it reconnects on its own.

All media through 443

A TURN relay over TLS, tested end to end with audio and video only on that path.

Automatic reconnection

A short drop shows “Reconnecting…” and the call carries on where it was.

Quality that adapts

Everyone gets the quality that fits their screen and network; nobody sends video that nobody sees.

Capacity and length under control

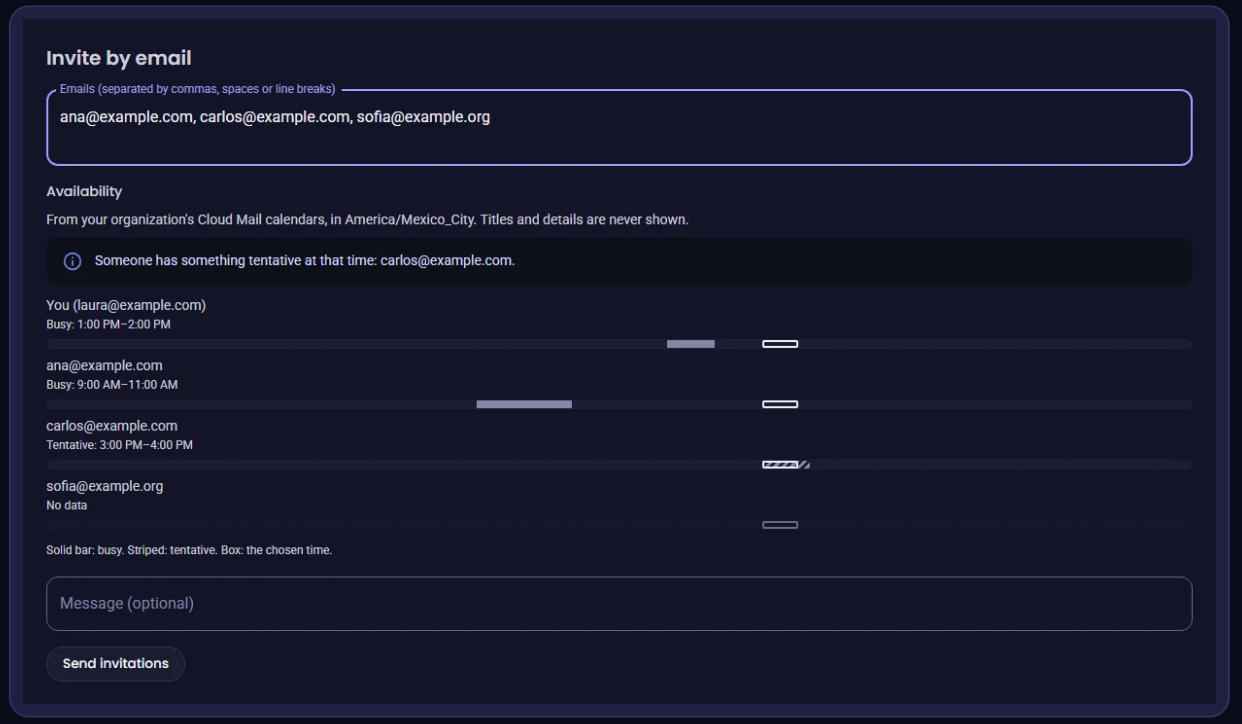

50 people per room and a length limit per installation, with a warning before the cut.

02 · ORGANIZE

Schedule, invite and see who is free, without leaving Cloud Meet

Create a meeting with one click or schedule it with a date and repetition. With Cloud Mail, the invitation leaves from your mailbox and you see everyone's availability before you pick the time.

- ✓ **Instant or scheduled.** Date, time, time zone, length and daily, weekly or monthly repetition.
- ✓ **Invitations with a calendar event.** Each person gets the link and the event; you see whether it was sent, is pending or failed.
- ✓ **From your own mailbox.** With Cloud Mail, the invitation leaves from your email and stays in your Sent folder.
- ✓ **Availability, without the details.** Busy, tentative or free for each guest, without seeing anyone's titles or places.

02 · ORGANIZE · RECORD

Record the meeting and keep it in your Drive

Whoever moderates records from their browser and everyone sees the notice. The recording stays on the meeting page and, with Cloud Drive, goes to your Drive in one click.

No extra servers

The meeting tab with the call's sound, saved every few seconds: if the network drops, what arrived is kept.

WebM · Chrome and Edge · One at a time

Save to Drive

It goes to the Meet recordings folder in your Drive and through its antivirus. Once in Drive, Cloud Meet deletes its copy.

Antivirus · Open in Drive

In the calendar event

If the meeting is in your Cloud Mail calendar, the recording's link is added to the event, with nobody doing it by hand.

Cloud Mail · Automatic

RECORDING WITH NOTICE

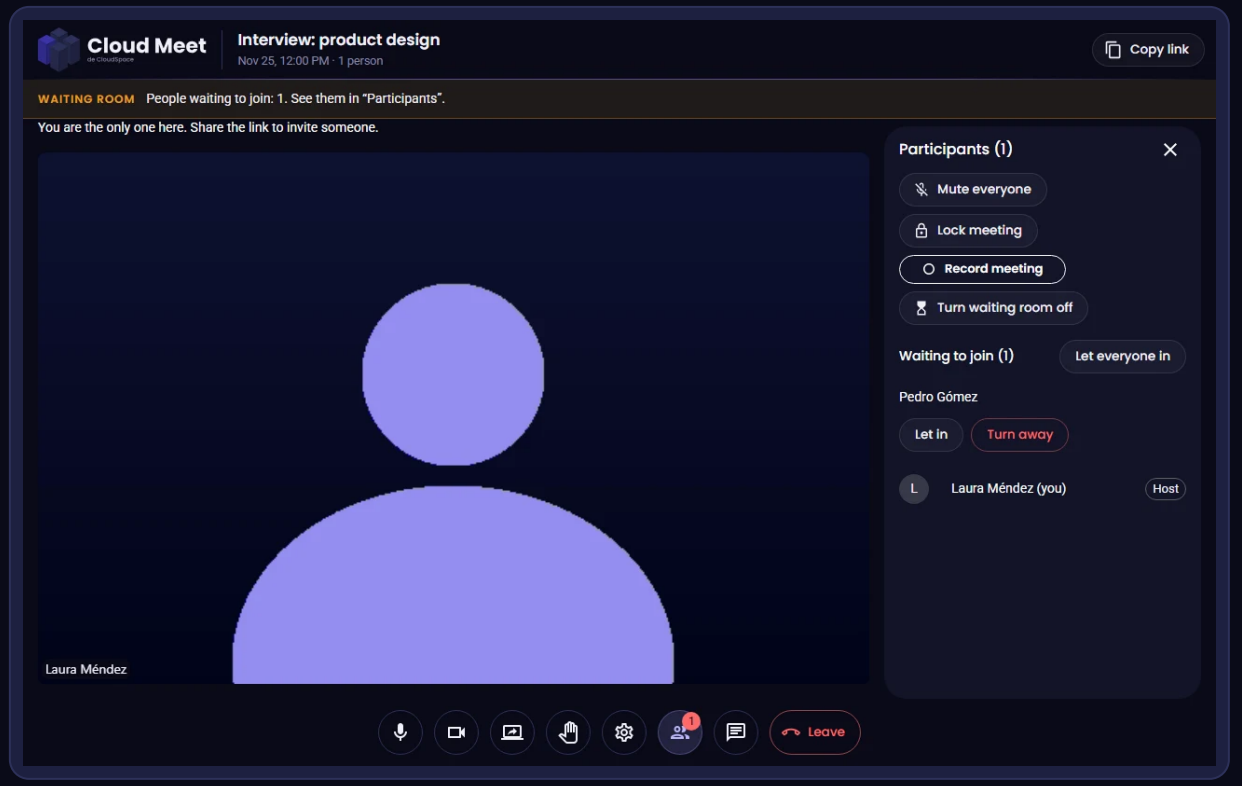

Everyone sees the “Recording” banner and newcomers know before they join. The organization decides whether recording is allowed, and Cloud Meet deletes its copy after 30 days.

03 · CONTROL · MODERATION

You decide who gets in and who has the floor

The host and co-hosts moderate from the participant list: admit, mute, lock or remove, without leaving the call.

- ✓ **Waiting room.** Admit or deny each person, or everyone; people with an account can skip it.
- ✓ **Mute, turn off the camera and remove.** One person or everyone; someone you remove cannot come back while the call goes on.
- ✓ **Lock the meeting.** Nobody else gets in, except the host and co-hosts.
- ✓ **Co-hosts.** For one call or for every call of the meeting, up to 20 people.

03 · CONTROL · ACCESS

Every meeting, as open as it needs to be

By default, anyone with the link gets in. When needed, you close it further: with a passcode, with links for a single person or for account holders only.

Guest passcode

Guests without an account type it in the lobby. It goes in the invitation email, never in the calendar file.

4 to 32 characters · Attempt limit

Personal links

For a single person, with their name and an expiry of 1, 7 or 30 days. It only works in the first browser that uses it.

Expiry · Revocable

Organization policy

Guests yes or no, a waiting room on creation or always, and whether recording is allowed. Each host can be stricter, not looser.

5 rules · All meetings

CALL LOG

The last 10 calls of each meeting: who joined and left and what the hosts did. Only the host sees it, and it is deleted after 90 days.

03 · CONTROL · ACCOUNTS

Protected accounts, sessions under control

Cloud Meet has its own sign-in with two-step verification. With CloudSpace, people sign in with their suite account.

Sign-in

Passwords of 12 characters or more, lockout after failed attempts and two-step verification with an authenticator app and recovery codes.

TOTP · Lockout

Open sessions

Everyone sees where they are signed in and can end it remotely. Changing the password ends the others.

Browser and IP · Sign out remotely

Administration

Create accounts and roles, deactivate (their meetings stop admitting anyone), set a new password or remove the second step.

Roles · Deactivate

A FAILURE GIVES NOTHING AWAY

If sign-in fails, the message is always “Incorrect username or password”: nobody can find out which accounts exist.

04 · INTEGRATE · CLOUDSPACE

One account for the whole suite, and Cloud Meet keeps up with everything

With CloudSpace, people are created once and sign in with their suite account. Cloud Meet follows every new hire, change and departure without anyone touching it.

Sign in with CloudSpace

Single sign-on and the Apps launcher with the CloudSpace products each account has.

SSO · Launcher

Team rooms

Each CloudSpace group can have its permanent room, always with the same link; every member manages it.

Groups · Fixed link

Clean departures

Deactivating someone ends their calls and sessions. Their meetings can pass to someone else, with the same link, guests and recordings.

Handover · Same link

IT ALSO WORKS ON ITS OWN

Cloud Meet has its own accounts and two-step verification. To connect it to CloudSpace, you pair them with a single-use code.

04 · INTEGRATE · CLOUD MAIL AND CLOUD DRIVE

Email, calendar and files, working together

Cloud Meet talks to the other CloudSpace products: what happens in a meeting reaches the calendar and Drive without copying links or uploading files by hand.

CLOUD MAIL

From the calendar

A Cloud Mail calendar event creates its Cloud Meet meeting, with its link inside the event.

CLOUD MAIL

Invitations and schedules

The invitation leaves from the organizer's mailbox, and availability comes from the organization's calendars.

CLOUD DRIVE

Recordings and files

Recordings go to Drive in one click, and Drive files are shared in the call with a link valid for 7 days.

WHAT COMES FROM ANOTHER PRODUCT

A meeting created from Cloud Mail is changed and cancelled in Mail; in Cloud Meet it shows “Open in Cloud Mail” and cannot be changed by mistake.

THE DIFFERENTIATOR

Your meetings don't go through anyone else's cloud

Each customer gets its own complete installation. Security is not a checkbox in the settings: it is in how every piece was built.

ISOLATION

Nothing shared

Its own media server, database and recordings, on your domain and with an automatic TLS certificate. Another customer's load never reaches you.

MEDIA

Encrypted in transit

Audio and video travel encrypted between the browser and the server, as WebRTC requires; the web and the 443 relay use TLS.

ACCESS

Joining takes a signed grant

Each join uses a signed grant valid for 2 minutes, and only Cloud Meet opens rooms: a deleted meeting does not reopen with an old link.

On a global platform, your meetings go through a third party's infrastructure. **With Cloud Meet the installation is yours alone, and Nube4 takes care of it.**

HOW IT IS DELIVERED

A complete installation, with a single door for the web

The web, the API and the media relay share port 443. The database and the media server's admin interface are not published to the Internet.

EDGE

Automatic TLS

A certificate for your domain, issued and renewed on its own.

Relay on 443

TURN/TLS with its own name, on the same port as the web.

APPLICATION

Cloud Meet

Accounts, meetings, invitations, moderation and policy, in Spanish and English.

Data

PostgreSQL, on a private network inside the server.

MEDIA

Media server

LiveKit, open source, distributes audio, video and screen.

Adaptive quality

Several qualities per camera, and only what is on screen.

Call media is never stored · only the recordings someone chooses to make

HOW TO BUY

On its own or with the suite, always on your installation

Cloud Meet is sold on its own or as part of CloudSpace, alongside Cloud Mail and Cloud Drive. Either way the installation is yours and Nube4 runs it.

ON ITS OWN

Cloud Meet

Your room

for dedicated meetings

Its own accounts with two-step verification, on your domain.

- ✓ Guests without an account
- ✓ Organization policy

WITH THE SUITE

CloudSpace

+ Mail and Drive

with a single account

Calendar, invitations from your mailbox and recordings in Drive.

- ✓ Team rooms
- ✓ Automatic hires and departures

ALWAYS INCLUDED

Operations

Nube4

installs and updates

Every version passes the automated tests before it is applied.

- ✓ Support in Spanish
- ✓ Manual in Spanish and English

GUESTS DON'T COUNT

Anyone joining with the link needs no account or license. The price depends on the size of the installation and is confirmed in the quote.

COMPARISON

Meetings with everything you need, on an installation that is yours alone

Global platforms are convenient, but your meetings stay in their cloud. Running your own video server gives you control, and all the work too. Cloud Meet sits in between.

CRITERION	CLOUD MEET	GLOBAL PLATFORM (SAAS)	YOUR OWN VIDEO SERVER
Where meetings end up	✓ On your installation	– In the provider's cloud	✓ On your server
Who runs it	✓ Nube4	✓ The provider	✗ Your team
Guests install nothing	✓ In the browser	– Depends on the platform	✓ In the browser
Email, calendar and files	✓ Cloud Mail and Cloud Drive	✓ Those of its suite	✗ You have to integrate them
Waiting room and policy	✓ Included	✓ Depends on the plan	– Depends on the setup

Qualitative comparison. Third-party prices and terms change: check them before putting them in writing.

FREQUENTLY ASKED QUESTIONS

The questions that come up on every call

Do guests have to install anything?

No. They open the link in Chrome or Edge, type their name and join, without an account. Your organization can require an account if it prefers.

What if the network blocks video calls?

Cloud Meet sends the encrypted media through port 443, the web's port. It is tested with all audio and video on that path.

Where are recordings kept?

On your Cloud Meet installation for up to 30 days, or in the host's Drive if you use Cloud Drive. Never on a third-party service.

Do I need CloudSpace?

No. Cloud Meet works on its own, with its own accounts. CloudSpace adds the single account, team rooms, Cloud Mail and Cloud Drive.

What language is it in?

Spanish and English, everywhere: the interface, sign-in, emails, error messages and the manual. Everyone picks their own.

NEXT STEP

Your next meeting, in your own cloud.

A 30-minute demo inside a Cloud Meet call: join as a guest from your own network and try the waiting room, recording and calendar. Then, a pilot with your team.
